

RASHEED MALIYEKKAL

Full Stack Ai Engineer

+919207421202 • rasheedmm1000@gmail.com • [Portfolio](#) • [Linkedin](#)

Summary

Applied AI Engineer with experience building and shipping production-grade GenAI products used by 10K+ users. Specialized in RAG systems, AI agents, LLM applications, vector search, and scalable SaaS platforms. Built and deployed enterprise AI solutions using OpenAI, Claude, Gemini, LangChain, LlamaIndex, AWS Bedrock, FastAPI, AWS, and Docker, with a strong focus on reliability, performance, and business impact

Experience

Self-Employed

Freelance Full Stack AI Developer

12-2025 - Present

- Delivered AI-powered SaaS and automation solutions for **10+ startups**, handling complete development from **architecture** to production deployment.
- built AI agents with tool calling, **memory**, and multi-step reasoning capabilities, automating complex workflows across CRM, support, operations, and internal business systems.
- Developed production-grade **RAG** systems with hybrid search with **BM25**, **reranking**, monitoring, logging, and evaluation frameworks, improving retrieval accuracy and delivering reliable AI responses at scale.
- Developed AI CRM, lead management, **voice AI calling agent**, and workflow automation tools, reducing manual effort by up to **80%** and improving operational efficiency.

Geekflare AI

Full Stack AI Developer

09-2025 - 12-2025

- Led development of an enterprise AI workspace platform, enabling users to interact with private company data through RAG-powered search and **conversational AI**.
- Built and optimized production RAG systems using **LangChain**, **LlamaIndex**, vector databases, **hybrid search**, reranking, and embeddings, improving retrieval accuracy and reducing hallucinations.
- Developed AI agents and LLM applications using OpenAI, **Claude**, and Gemini for **semantic search**, document intelligence, summarization, and workflow automation.
- Implemented monitoring, logging, **evaluation**, and performance optimization for **GenAI** services, ensuring reliable and scalable production deployments.
- Improved response quality and inference speed through prompt engineering, context optimization, and advanced retrieval strategies.
- Built and deployed scalable AI systems using Python, **FastAPI**, PostgreSQL, AWS, **Docker**, and Cloudflare, supporting real-world enterprise workloads.

Rexa Technologies

Full Stack SaaS Developer

12-2023 - 8-2025

Led team building full-stack, scalable SaaS apps.

- Led development of multiple SaaS products serving **10K+ users**, using Next.js, Node.js, AWS, Docker, PostgreSQL, MongoDB, and Redis with **99.9%** uptime.
- Built AI-powered applications and **agents** using OpenAI, Claude, Hugging Face, and **ElevenLabs**, enabling automated **voice**, chat, and business workflows.
- Automated business operations through n8n, **Zapier**, **WebSockets**, and serverless architectures, reducing manual effort by **80%+** and improving user engagement.
- Implemented **CI/CD**, payment integrations (Stripe, Polar), caching, monitoring, and **performance optimizations**, improving deployment reliability and supporting paying customers at scale.

Education

TKM COLLEGE OF ENGINEERING

B.Tech. in Computer Science and Engineering

Kollam

08/2021 - 07/2024

MADIN POLYTECHNIC COLLEGE

DIPLOMA in Computer Science and Engineering

Malappuram

07/2018 - 08/2021

Skills

Next.js, React.js, FastAPI, Celery, Python, Node.js, TypeScript, AWS, Serverless Architecture, Docker, MongoDB, PostgreSQL, Redis, OpenAI API, LLMs (Claude, Open Ai, Vertex AI), RAG Systems (LlamaIndex, Langchain, Vector Databases, Qdrant, Pinecone Embeddings, BM25, Rerankers), AI Agents & Prompt Engineering, REST APIs & Production-Grade SaaS Architecture, Docker, GIT, Cursor, Antigravity, Claude Code, Crawl4ai, Sentry

Projects

Chatlo Notes

[Link](#)

- Built an AI-powered note-taking platform for web and mobile with **LLM-based** summarization, content generation, and intelligent note management.
- Developed **RAG-powered** chat with notes using embeddings, vector search, and semantic retrieval, enabling users to interact with their knowledge base through natural language.
- Built automated data ingestion pipelines for **PDFs**, web pages, documents, and meeting transcripts with parsing, **chunking**, indexing, and **knowledge extraction**.
- Integrated **Google Meet** transcription and AI-powered meeting summaries, automatically generating structured notes, action items, and key insights.
- Implemented real-time sync, secure multi-tenant architecture, and user-level data isolation for reliable cross-platform collaboration.
- Optimized performance using **caching**, async processing, and scalable backend services built with Node.js, **Python**, **vector databases**, and cloud infrastructure.

Screenzy

[Link](#)

- Built an AI-powered website generation platform using **Next.js**, **AWS Bedrock**, and **Cloudflare D1**, enabling users to create production-ready websites through natural language prompts.
- Integrated foundation models through AWS Bedrock for automated content generation, **page creation**, and marketing copy generation.
- Developed scalable **AI workflows**, backend APIs, and project management systems supporting **real-time** website generation and editing.
- Implemented Cloudflare D1, caching, and optimized query patterns for **low-latency** performance and efficient resource utilization.
- Built secure multi-tenant architecture with authentication, user management, and project isolation for SaaS deployments.
- Deployed and monitored production workloads with **logging**, observability, and **cost optimization** strategies to ensure reliable AI-powered website generation.

Dietly

[Link](#)

- Built a cross-platform AI nutrition and fitness app for iOS and Android with food recognition, calorie tracking, and personalized health insights.
- Integrated OpenAI and Google Gemini/Live Call APIs for real-time food detection and AI health coach, achieving over 90% recognition accuracy.
- Developed a RAG-powered health assistant using Firestore, vector search, and user activity data to deliver context-aware recommendations based on meal history, water intake, workouts, and fitness goals.
- Built an AI voice coach with conversational memory and health knowledge retrieval, increasing user engagement and contributing to a 40% improvement in retention.

Achievements

- **Hack@Arch – GEC Thrissur (2022, National Level Hackathon)**
2nd Place – Built a decentralized real estate app using **Ethereum** and **IPFS** for property

- verification with **NFT-based ownership**.
- **Latency – TKMCE IEDC (2022, National Level Hackathon)**
2nd Place – Developed a native **Android app** for farmers to auction bulk produce, featuring a real-time **bidding system** using **Java** and **Kotlin**.
- **Google WOW Hackathon (2023 – Shortlisted to Finale)**
Built a community platform connecting users to domain experts and AI for instant doubt resolution. Designed an **agentic AI** system that mimics human mentors, enabling scalable knowledge sharing and context-aware guidance.
