

RASHEED MALIYEKKAL

Full Stack + Ai Engineer

+919207421202 • rasheedmm1000@gmail.com • [Portfolio](#) • [Linkedin](#)

Summary

SaaS Full Stack & AI Developer with experience building and deploying 8+ SaaS platforms and 5+ mobile applications used by real-world users. Skilled in end-to-end product development, including backend architecture, frontend development, and AI integration using LLMs, RAG pipelines, and automation systems. Proven ability to design scalable, high-performance applications with a focus on cost optimization, reliability, and user experience. Experienced in shipping production-ready solutions and collaborating with teams to deliver impactful products.

Experience

Geekflare AI

Full Stack AI Developer

09/2025 - 11/2025

- Led end-to-end development of scalable, production-grade **RAG** based Enterprise Workspace AI platform, enabling enterprise users to interact with private datasets through intelligent search and conversational interfaces
- Built and deployed **enterprise RAG systems using LlamaIndex and vector databases**, improving **retrieval accuracy and response relevance** for large-scale unstructured data
- Designed and optimized **RAG pipelines (data ingestion, chunking, embeddings, re-ranking)**, significantly **reducing hallucinations and improving LLM response quality**
- Developed **LLM-powered applications** using **OpenAI, Claude, and Gemini APIs, Langchain** enabling use cases such as **semantic search, summarization, and decision support systems**
- Engineered **AI agents and automation workflows** to streamline enterprise operations, reducing **manual effort and turnaround time** for key processes
- Improved system performance by implementing **hybrid search (vector + keyword)** and advanced **context tuning**, resulting in **faster inference and higher precision retrieval**
- Applied **prompt engineering** and **fine-tuning** strategies to enhance task-specific **accuracy, consistency**, and output reliability across AI workflows
- Deployed and managed **scalable GenAI services** with **monitoring, logging, and performance optimization**, supporting high-traffic, real-world **production workloads**
- Used **Python, Fast Api, PostgreSQL, AWS, Cloudflare, Docker, DigitalOcean, and Git with LangChain, LlamaIndex, and vector databases** to build and scale production-grade RAG systems

Self-Employed

Freelance & Full Stack SaaS Developer

08/2023 - 8/2025

Freelance SaaS Dev | Led team building full-stack, scalable SaaS apps.

- Led end-to-end development of **AI-powered SaaS platforms** ([Clawinst.com](#), [chatlo.io](#), [notes.chatlo.io](#), [rexahire.com](#)) collectively serving **10K+ active users** in production
- Architected and deployed **scalable, production-ready applications** using **Next.js, Node.js, Firebase, Postgres, MongoDB, and AWS, Docker, Redis** achieving **high availability (~99.9% uptime)**
- Designed and implemented **modular frontend systems and reusable UI components**, ensuring **consistent UX and faster feature delivery across products**
- Integrated **LLM-based AI agents** using **OpenAI (GPT), Claude, Hugging Face, and ElevenLabs**, enabling **automated voice and text workflows** for real-world use cases
- Built and managed **CI/CD pipelines** with **GitHub Actions, AWS Lambda, and Firebase Hosting**, reducing **deployment time and improving release reliability**
- Automated business workflows using **n8n and Zapier**, reducing **manual effort by 80%+ and improving operational efficiency**
- Developed **real-time features** using **WebSockets and serverless APIs**, enhancing **application responsiveness and user engagement**
- **Optimized backend performance** with lazy loading, caching, and asynchronous processing for high throughput systems
- Optimized backend systems with **caching, lazy loading, and asynchronous processing**, improving **performance and handling high-throughput workloads**
- Led **Agile development cycles**, collaborating with cross-functional teams and managing releases using **Git, Jira, and automated testing pipelines**
- Integrated **payment gateways (Stripe, Polar)**, enabling **real transactions and converting users into paying customers**
- Iterated rapidly on product features based on **real user feedback and usage data**, improving **retention and user experience**

Education

TKM COLLEGE OF ENGINEERING

Kollam

B.Tech. in Computer Science and Engineering

08/2021 - 07/2024

MADIN POLYTECHNIC COLLEGE

Malappuram

DIPLOMA in Computer Science and Engineering

07/2018 - 08/2021

Skills

Next.js, React.js, FastAPI, Celery, Python, Node.js, TypeScript, AWS, Serverless Architecture, Docker, MongoDB, PostgreSQL, Redis, OpenAI API, LLMs (Claude, Open Ai, Vertex AI), RAG Systems (LlamaIndex, Langchain, Vector Databases, Qdrant, Pinecone Embeddings, BM25, Rerankers), AI Agents & Prompt Engineering, REST APIs & Production-Grade SaaS Architecture, Docker, GIT, Cursor, Antigravity, Claude Code, Crawl4ai,

Projects

Clawinst

[Link](#)

- Built a platform to **deploy isolated OpenClaw instances per user using Docker**, ensuring **secure, sandboxed environments for each deployment**
- Developed backend services using **Python (FastAPI)** to manage **instance provisioning, API routing, and lifecycle control**
- Integrated **OpenRouter** for flexible **LLM access and routing across models** with cost-efficient usage
- Enabled **one-click deployment of AI tools** with pre-configured environments, reducing setup complexity for non-technical users
- Designed system to **spin up and manage containerized AI instances dynamically**, improving **scalability and resource isolation**
- Implemented **async processing and efficient resource handling** to support multiple concurrent user deployments
- Used **Docker based infrastructure** to provide **reproducible, portable, and secure AI environments**

Chatlo.io

[Link](#)

- Built a **multi-tenant AI chatbot platform** using **RAG architecture** with secure document ingestion, embeddings, and vector search for enterprise knowledge bases
- Designed **end-to-end RAG pipelines (ingestion, chunking, embeddings, retrieval, re-ranking)** to improve **response accuracy and reduce hallucinations**
- Implemented **agentic workflows with tool/function calling**, enabling automation across **Zendesk, Notion, Google Sheets, Calendly, and Shopify** for support, CRM, scheduling, and e-commerce actions
- Enabled **multi-source data ingestion** (documents, websites, APIs) with scalable indexing and **context-aware retrieval systems**
- Developed **real-time chat infrastructure (WebSockets + streaming responses)** for low-latency, interactive AI conversations
- Built **LLM orchestration layer** with **caching, token optimization, and fallback strategies**, reducing **cost and improving reliability**
- Added **analytics dashboard (usage, conversations, token consumption)** for monitoring performance and user behavior
- Implemented **secure multi-tenant architecture, RBAC, and API access**, supporting enterprise-grade deployments
- Deployed scalable services using **AWS, Docker, serverless functions, PostgreSQL, Redis, and vector databases**

Notes.Chatlo.io

[Web](#) [App](#)

- Developed an **AI-powered note-taking platform (web + mobile)** with **LLM-based summarization, rewriting, and content generation**
- Implemented **semantic search and RAG-based note interaction**, allowing users to **chat with their notes using embeddings and vector search**
- Built **Google Meet transcription integration**, converting meetings into structured notes with **AI-generated summaries and action items**
- Enabled **data ingestion from web URLs, PDFs, and documents**, with automated **parsing, chunking, and indexing pipelines**
- Added **real-time sync and cross-device support**, ensuring seamless note access across platforms
- Implemented **context-aware AI features** like smart suggestions, rewriting, and knowledge extraction
- Designed **secure authentication and user-level data isolation** for multi-user environments
- Optimized performance using **caching, async processing, and efficient state management**
- Built responsive UI using **Next.js, React Native, Tailwind CSS**, with backend powered by **Node.js, Python, and vector databases**

Dietly, AI Nutrition & Calorie Tracker

[Link](#)

- A **cross-platform AI health app** that recognizes food items and tracks calories using camera input
- **Integrated OpenAI and Google Vision APIs** for real-time food detection with over 90% accuracy
- **Achieved 40% higher retention rate** by offering personalized, goal-driven meal suggestions
- **Enabled calorie tracking and nutrition breakdown** to support weight loss and fitness goals

Achievements

- **Hack@Arch – GEC Thrissur (2022, National Level Hackathon)**
2nd Place – Built a decentralized real estate app using **Ethereum** and **IPFS** for property verification with **NFT-based ownership**.
- **Latency – TKMCE IEDC (2022, National Level Hackathon)**
2nd Place – Developed a native **Android app** for farmers to auction bulk produce, featuring a real-time **bidding system** using **Java** and **Kotlin**.
- **Google WOW Hackathon (2023 – Shortlisted to Finale)**
Built a community platform connecting users to domain experts and AI for instant doubt resolution. Designed an **agentic AI** system that mimics human mentors, enabling scalable knowledge sharing and context-aware guidance.
